Allowable Subject Matter

1. Claims 1-29 are allowed.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

The prior art taken singly or in combination does not teach or suggest, a method for allocating a stream of operations in a graphics system to be performed by a plurality of calculation pipelines, among other things, comprising determining if the first calculation pipeline is performing a low latency operations then providing a next operation in the stream of operations to the first calculation pipeline; and if the first calculation pipeline is performing a high latency operation, then providing the next operation in the stream of operations to a second calculation pipeline.

The closest prior art, Hauck et al. (U.S. Patent No. 5,907,688) teaches a method of arbitrating between calculation pipelines, comprising a latency compare unit to compare the actual latency of the data streams with a threshold latency to determine a high or low latency operation. If the actual latency is greater than the nominal latency, the higher bandwidth channel is chosen. If the actual latency is less than or equal to the nominal latency, a round-robin priority selection algorithm is used.

However, reference Hauck et al. does not teach 'if the first calculation pipeline is performing a high latency operation, then providing the next operation in the stream of operations to a second calculation pipeline'.
